DETAILED ACTION

Response to Appeal Brief

In view of the Appeal Brief filed on 02 February 2007, and to consider the Information Disclosure Statements filed on that date, PROSECUTION IS HEREBY REOPENED. New Grounds of Rejection are set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (1) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (2) initiate a new appeal by filing a notice of appeal under 37 CFR 41.31 followed by an appeal brief under 37 CFR 41.37. The previously paid notice of appeal fee and appeal brief fee can be applied to the new appeal. If, however, the appeal fees set forth in 37 CFR 41.20 have been increased since they were previously paid, then appellant must pay the difference between the increased fees and the amount previously paid.

A Supervisory Patent Examiner (SPE) has approved of reopening prosecution by signing below:

Claims 1-2 and 4-14 are pending.

Response to Arguments

Applicant's arguments filed 2 February 2007 have been fully considered. The Examiner will take this opportunity to further explain the cited reference and the interpretation of applicants' claims in view of the disclosures.

Rejections under 35 USC 112 are withdrawn in view of explanations and their effect.

Applicant argues that the Examiner errs in interpreting the claims as having no support for extracting structure data such as *XML tags, metadata*. Applicant cites alleged support from paragraphs 0033, 0034, 0050 and 0058 of his amended specifications of 29 March 2005.

In response to applicant's arguments, There is no mention of "...structure data..." and is not defined. The term is given its broadest reasonable interpretation to refer to XML tags, metadata, as in Fig. 6. This interpretation is supported by Applicant's arguments concerning interpretation by one of ordinary skill in the art. Transaction slip data is interpreted as referring to an XML document. The Examiner makes this interpretation based on applicant's Fig. 2 (prior art). Extracting structure data is interpreted as extracting XML tags from an XML document.

Information Disclosure Statement

The information disclosure statement filed 6 April 2007 fails to comply with 37 CFR 1.98(a)(3) because it does not include a concise explanation of the relevance, as it is presently understood by the individual designated in 37 CFR 1.56(c) most knowledgeable about the content of the information, of each patent listed that is not in the English language. It has been placed in the application file, but the information referred to therein has not been considered.

There is no explanation of the relevancy of various references.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-2, 4-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Chang (US 6,584,459).

Chang discloses an EDI/XML environment that manages documents containing data (applicant's transaction slip data documents) in electronic commerce, with database devices.

As per claims 1, 6, 7 and 11, Chang discloses:

- extracting structure data as a search item of the transaction slip data document therefrom. See, for example, at least Col. 20, lines 1-50. For transaction detail information extracted, see, for example, at least Col. 5, line 50-Col.6, line 15. Detail transaction data includes price, publication date, for example.
- storing the structure data extracted as management data in correlation with the transaction data; see, for example, management data, such as publisher, as in Col.5, lines 17-45.
- searching the management data so as to extract correlated transaction slip data.
 See at least Col. 7, lines 45-67.
- transmitting the transaction slip data extracted [in the search step] over a network.
 See at least sending results to interfaces, at least Col. 6, line 17-line 45.

Application/Control Number: 09/760,878

Art Unit: 3625

 receiving the transmitted slip data. See, for example, at least Figs. 1, 2 and related text, and references to various units that receive transmitted detail data.

 converting a first format of the received transaction slip data into a second format based on a transmission destination (see, for example, converting and storing formats according to destination such as internal and external targets, as in Col. 7, lines 53-67)

Chang *does not* specifically disclose that the first format of the received transaction slip data is usable by an order issuer (buyer) and the second format based on a transmission destination is usable by an order acceptor (seller) in an electronic business transaction between the order issuer and order acceptor without requiring a tailoring of servers of the order issuer and the order acceptor. Chang discloses a relational facility that allows users to define new and distinct data types and subtypes, according to user expectations. See, for example, at least Col.7, lines 38-54.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to extend Chang to disclose that the first format of the received transaction slip data is usable by an order issuer (buyer) and the second format based on a transmission destination is usable by an order acceptor (seller) in an electronic business transaction between the order issuer and order acceptor without requiring a tailoring of servers of the order issuer and the order acceptor.

One of ordinary skill in the art at the time the invention was made would have been motivated to extend Chang to disclose that the first format of the received transaction slip data is usable by an order issuer (buyer) and the second format based

on a transmission destination is usable by an order acceptor (seller) in an electronic business transaction between the order issuer and order acceptor without requiring a tailoring of servers of the order issuer and the order acceptor for the obvious reason that there is a need to manage an abundance of XML documents, and a need for a product that understands document structures and allows a user to store, search using structure queries and retrieve XML documents and their data within a database system. See, for example, Fig. 2, DB2 XML extender, which converts data to and from formats used by other systems and parties.

As per claim 2, Chang discloses that correlation between data is managed with a key that is common. See, for example, at least references to Docld, Index, Key, RID, at least Fig. 4, 6, 12-13 and related text. See also at least Col. 19, line 1- Col. 20, line 50. See also references to primary keys, foreign keys, DTDid, and other keys that correlate data among the various data objects, at least Col. 13, line 1-Col. 15, line 48.

As per claim 4 Chang discloses that users are allowed to define new searches for retrieval of XML documents. See, for example, Col. 6, lines 19-45.

As per claim 5, Chang discloses

- that the document containing transaction data is an XML document. See, for example, at least Col. 2, line 18-Col. 3, line24, Col. 3, line 47-Col. 4, line 18, Figs. 3, 8, 9 and related text.
- that users are allowed to define new searches for retrieval of XML documents.
 See, for example, at least Col. 6, lines 38-45, Col. 7, line 54-Col. 8, line 3. As per claims 5, 10 and 14, a user may alter targets of a search by changing a search

Application/Control Number: 09/760,878

Art Unit: 3625

query according to particular tags found in XML documents, such as an author tag in XML document of Col. 5 that is used as a search parameter in the query found in Col. 20.

Claim 6 is rejected on the same grounds as claim 1.

Claim 7 is rejected on the same grounds as claim 1.

As per Claim 8, Chang discloses changing the structure <u>data</u> of a document <u>to</u> <u>be considered</u> including the management data. Chang discloses that users may define new searches by changing search parameters such as management data. See, for example, at least Col. 6, lines 38-45, Col. 7, line 54-Col. 8, line 3.

Claim 9 is rejected on the same grounds as claim 5.

Claim 10 is rejected on the same grounds as claim 5.

Claim 11 is rejected on the same grounds as claim 1.

Claim 12 is rejected on the same grounds as claim 8.

Claim 13 is rejected on the same grounds as claim 5.

Claim 14 is rejected on the same grounds as claim 5.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to James H. Zurita whose telephone number is 571-272-6766. The examiner can normally be reached on 8a-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jeffrey A. Smith can be reached on 571-272-6763. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
